

1

The Neptunus rain gutter tensioning system ensures that the roof canopy stays taut

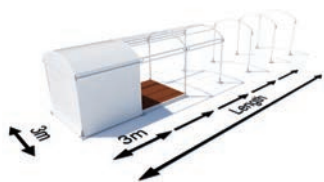

2

Corner pieces of 30°, 60° or 90° provide flexibility to any layout

3

The Neptunus raised cassette floor ensures a stable and robust base

### The Product

The Neptunus Alu Pergola is an aluminium-framed awning that can be used as a connection between two structures, or as a stylish entrance to a temporary structure or building.

### Design

The Alu Pergola frame consists of a clear span aluminium framework, with or without fabric sidewall panels and can be supplied with a Neptunus cassette system floor.

### Features

The Alu Pergola is 3 metres wide and the length can be extended as required, in increments of 3 metres. As standard the roof canopy and sidewall panels are opaque (non-permeable to light) 80% PVC fabric. Wall options include PVC windows or fully transparent sides and roof. Corner pieces of 30°, 60° or 90° provide flexibility to any layout. The Neptunus rain gutter tensioning system ensures that the roof canopy stays taut at all times and adding a cassette floor provides a stable and robust base.

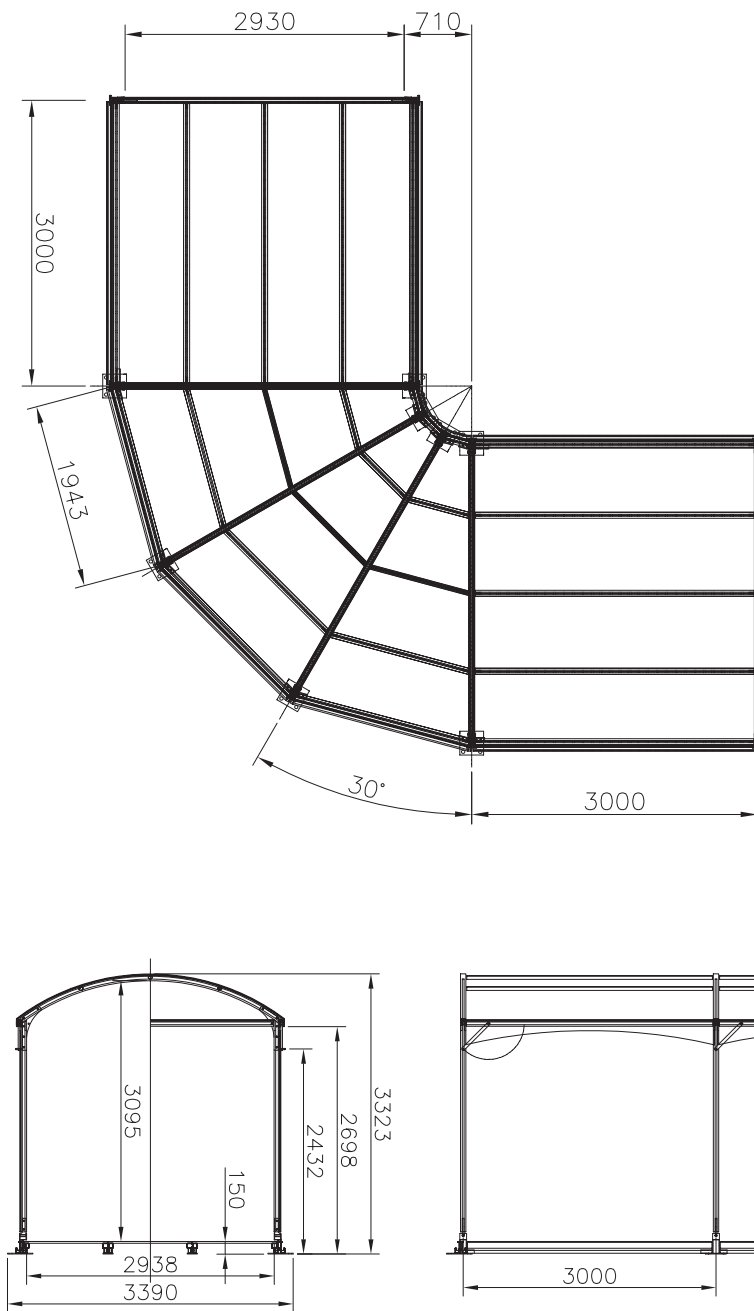

### Applications

The Alu Pergola can be used as a corridor linking structures or buildings or can be positioned at a building's entrance to create a stylish access point for events.
