

1

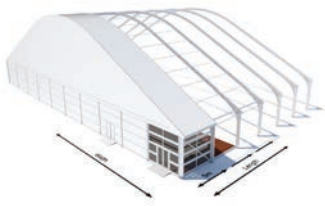

The distinctive curved roof creates a striking impression

2

Impressive sidewall height of almost 5 metres

3

Huge free span of 40, 50 or 60 metres; ideal for festival pavilions

Product

The Alure Globe Giant is an aluminium clear span structure with a distinctive curved roof. The modern design offers smart, exclusive accommodation for any event and provides large clear floor space for a number of uses.

Design

The Alure Globe Giant is available in widths of 40, 50 or 60 metres and has a sidewall height of almost 5 metres, which in turn produces a ridge height of 12m (40m), 15m (50m) and 17m (60m). The length is unlimited and can be increased in increments of 5 metres. The roof canopy comes in opaque (non-permeable to light) finished white externally and black internally. Transparent or translucent roof skins can be made to order. Horizontal wall panels are either rigid PVC or glass, and fully interchangeable. There is also the option of sliding fabric curtain walls. The Alure Globe Giant is fitted with the Neptunus raised cassette floor as standard and the internal finish has a stylish modern feel. The Neptunus rain gutter tensioning system ensures that the roof canopy stays taut at all times and rainwater is drained in concealed downpipes.

Features

As standard the structure legs are positioned outside the walls providing the full width measurement quoted and sleek, uninterrupted wall panels. There is also the option for a partially open gable skin, where the pvc skin follows the shape of the roof creating an open pavilion and offering great lines of sight.

Applications

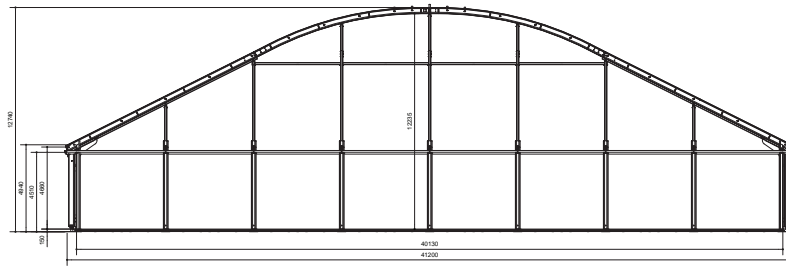

The Alure Globe Giant is ideally suited for events where a large, free span is important or a high-quality finish is required; making it the ideal solution for festivals, corporate events, exhibitions and product launches.
