

1

Options include atriums, balconies and terraces

2

The use of upper floors makes the best use of available space

3

Staircases are available in wood or aluminium

The Product

Neptunus Multi-deck structures are available as a two or three storey construction, making the most of available floor space and allowing visitors to take in the best views at the location.

Design

Double and Triple Decker Structures are supplied with rigid PVC sidewall panels or glass panels, and there is also the option of sliding fabric curtain walls. The roof canopy can be supplied in opaque (non-permeable to light) 80%, translucent or fully transparent versions. The Neptunus rain gutter tensioning system also ensures that the roof canopy stays taut at all times and rainwater is drained at central points. The structure is fitted with a raised Neptunus cassette floor as standard. Balconies are available cantilevered at 2 metres wide or 4 metres wide with supporting legs and wooden or aluminium staircases are provided.

Features

Neptunus Double and Triple Decker Structures are available in widths of 8, 10, 12, 16, 20, 24 and even 32 metres. The length is unlimited and can be extended in increments of 4 or 5 metres. These structures can be connected to structures of the same type as well as other Neptunus designs and can be equipped with internal finishes to suit your requirements. By adding atriums, terraces and balconies these already impressive structures will stand out at any event.

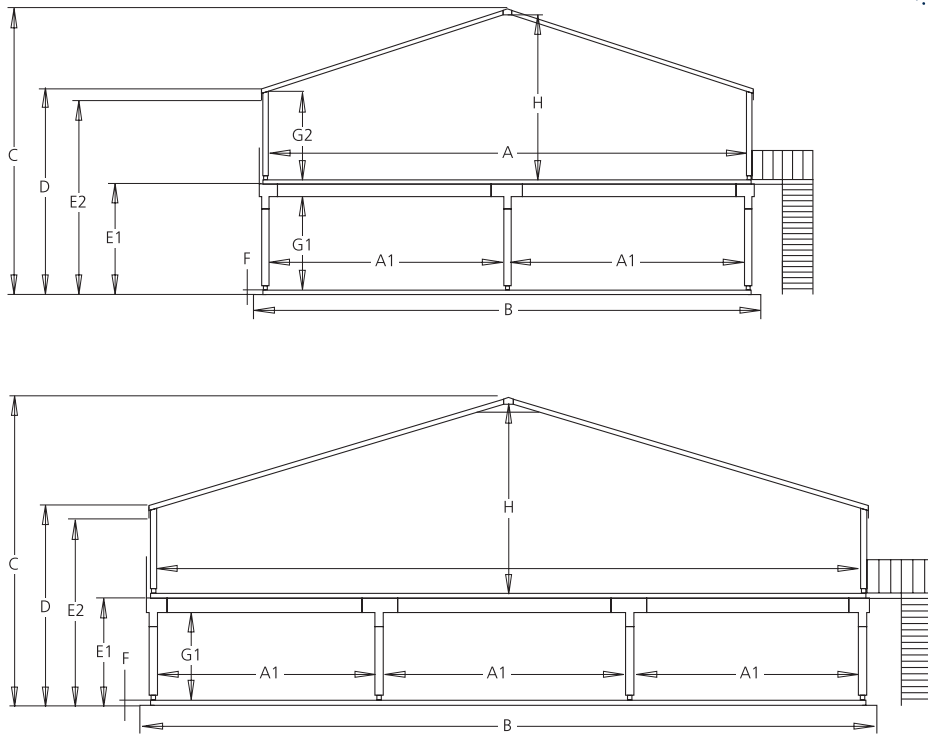

Applications

When space is at a premium or a view is picturesque or critical the Neptunus Multi-deck Structures are the ideal choice and are often seen at sporting events, horticultural events, trade fairs and exhibitions.
