

1

360° roof

2

30m clear span roof – extendable with 5m canopy

3

Open sides, solid or glass walls

The Product

One of the most technologically advanced temporary structures available in today's market; the Salacia is a mix of high-tech innovative design and high quality, durable components. It is fully relocatable, readily available and suitable for both short and long term use.

The Salacia is a durable construction that is quick to assemble. This fully-rounded structure, which was named Salacia after the female Roman divinity of the sea and wife of Neptune, joins the Evolution series. It is an eye-catcher for any event due to its multifunctional use.

The Construction

The Salacia has an aluminium construction with spaceframe roof, taut roof canopy and Neptuneus raised cassette floor. The roof is hydraulically lifted into place allowing for fast construction. The Salacia can also be added, as a semicircle, to our existing Evolution structure range.

Quality

Offering a clear span of 30 metres, it can be extended with a five-metre canopy with a floor area of 706 or 1285 square metres.

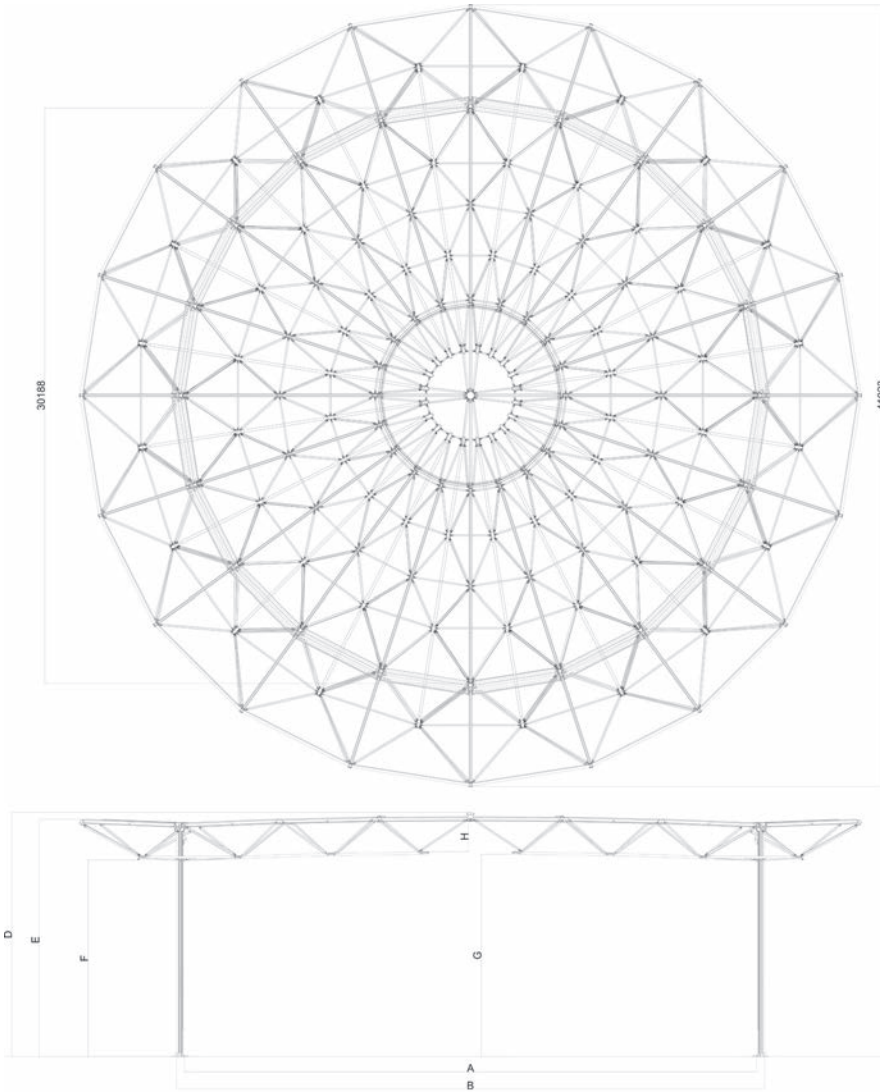

Its height is variable between 8 and 12 metres, and the structure can be open sided or closed in with rigid walls or glass panels. The aluminum leg columns are positioned every 5 or 10 metres around the perimeter, depending on the height.

Functionality

The Salacia is fabricated of high-quality materials and suitable for a multitude of uses including exhibition halls, festivals, product launches and hospitality facilities.

The Neptuneus Salacia is available to rent or to buy.
