

1 Feature raised gables

2 Variable heights of 5 to 12 metres

3 Clear spans up to 40 metres

The Product

One of the most technologically advanced temporary structures available in today's market; the Neptunus Evolution III is a mix of high-tech innovative design and high quality, durable components. It is fully relocatable, readily available and suitable for both short and long term use.

Design

As standard the Evolution III comprises an aluminium spaceframe roof, insulated sidewall panels and PVC Thermo roof. For longer hire periods we fit rigid insulated roof panels. Floor options include the Neptunus raised cassette floor or a solid 16cm laminated wooden floor for long-term use. If required the side elevations can be fitted with graphics of your corporate colours and logo.

Features

The Evolution III has a modular design with clear span widths up to 40 metres. The length of the structure is limitless and can be extended in increments of 5 metres. The innovative design means that the spaceframe roof is assembled at ground level and hydraulics lift the whole roof in a single movement. Horizontally fitted sidewall panels facilitate external wall heights from 5 to 12 metres. This temporary building can be equipped with mezzanine floors, climate control, vehicle doors, glass panels and electric sliding doors. The insulated panels reduce climate control costs and emissions and all parts are recyclable at the end of life, making the Evolution III an environmentally aware choice.

Applications

The Evolution III is a durable construction that is quick to assemble and suitable for usage periods from a few days to several years. The high-quality materials make the Evolution III suitable for a multitude of uses including event halls, hospitality structures, showrooms, exhibition halls, sports halls, retail outlets and airport terminals.

The Evolution III is available to rent or to buy.
